

Gravidry

**No more indoor foams for
outdoor products.**

At Gravidry we have a reticulating technology that ensures that the foam has high strength and durability, guaranteeing a long life for your products.

High comfort reticulated foam

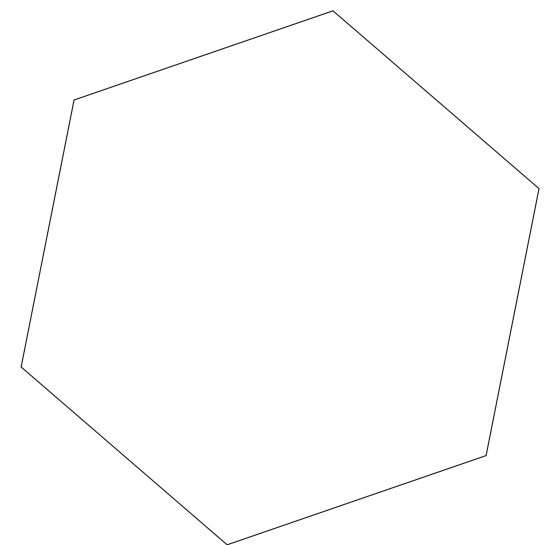

Interior innovation.

Revolution on the outside.

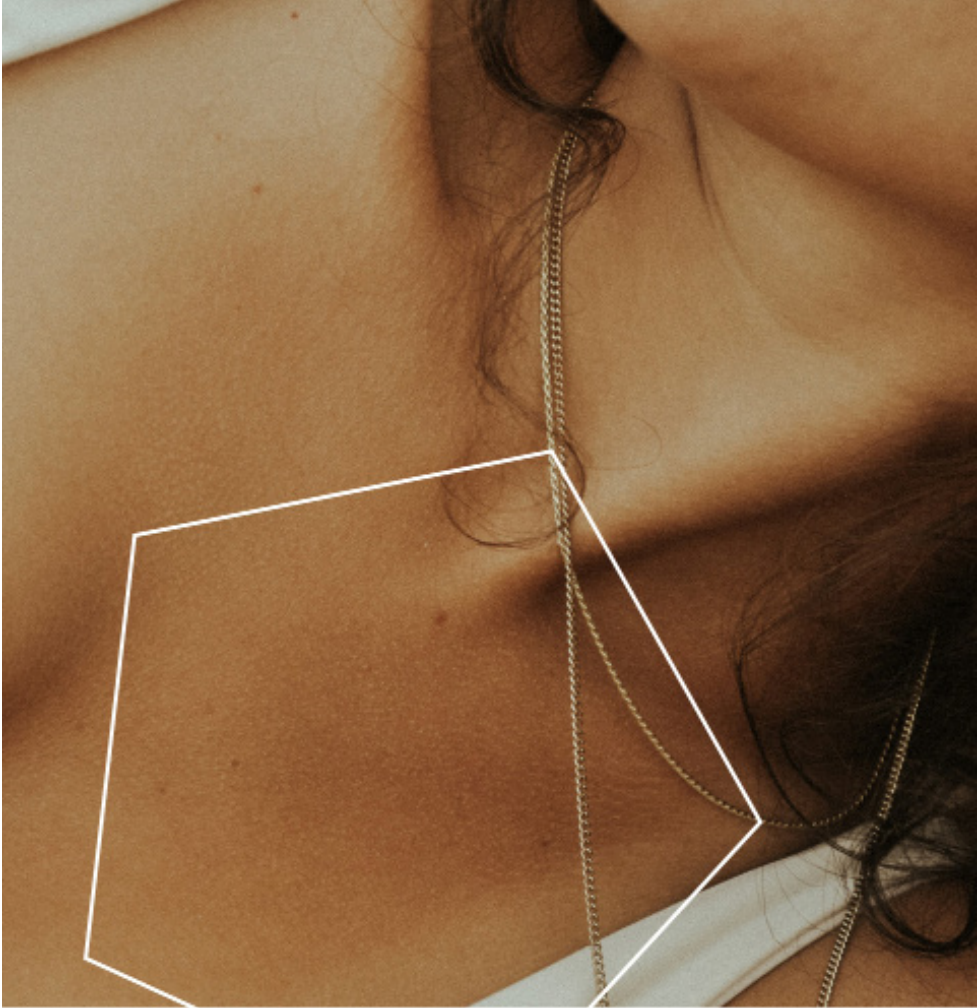

Discover Gravidry's innovative 100% open cell cross-linked polyurethane (PUR) foam. Its performance and extreme comfort will revolutionise your use and options in outdoor products

Gravidry is the world's No. 1 company specialising in developing outdoor comfort for outdoor furniture manufacturers and hospitality projects.

The comfort revolution.

Gravidry foam offers totally revolutionary comfort features that open the door to the development of new products, improvement of existing products and most importantly: new sensations that are much more pleasant, softer and firmer than other options on the market. Comfort that you notice and feel.

Guaranteed breathability. No cold, no heat.

Breathability allows the human body to dissipate humidity and body heat in order to regulate its own temperature and keep it constant in non-extreme conditions. This property of our Gravidry foams is a real revolution in comfort and rest. Even if you are a hot person, its great transpiration, offers a sensation of freshness in contact with the user's skin that will be maintained throughout its use.

Innovation to dream a revolution in different sectors.

Its versatility gives it multiple applications in various sectors: furniture, nautical or mattresses among others, responding to a market that demands a product with high technology and performance.

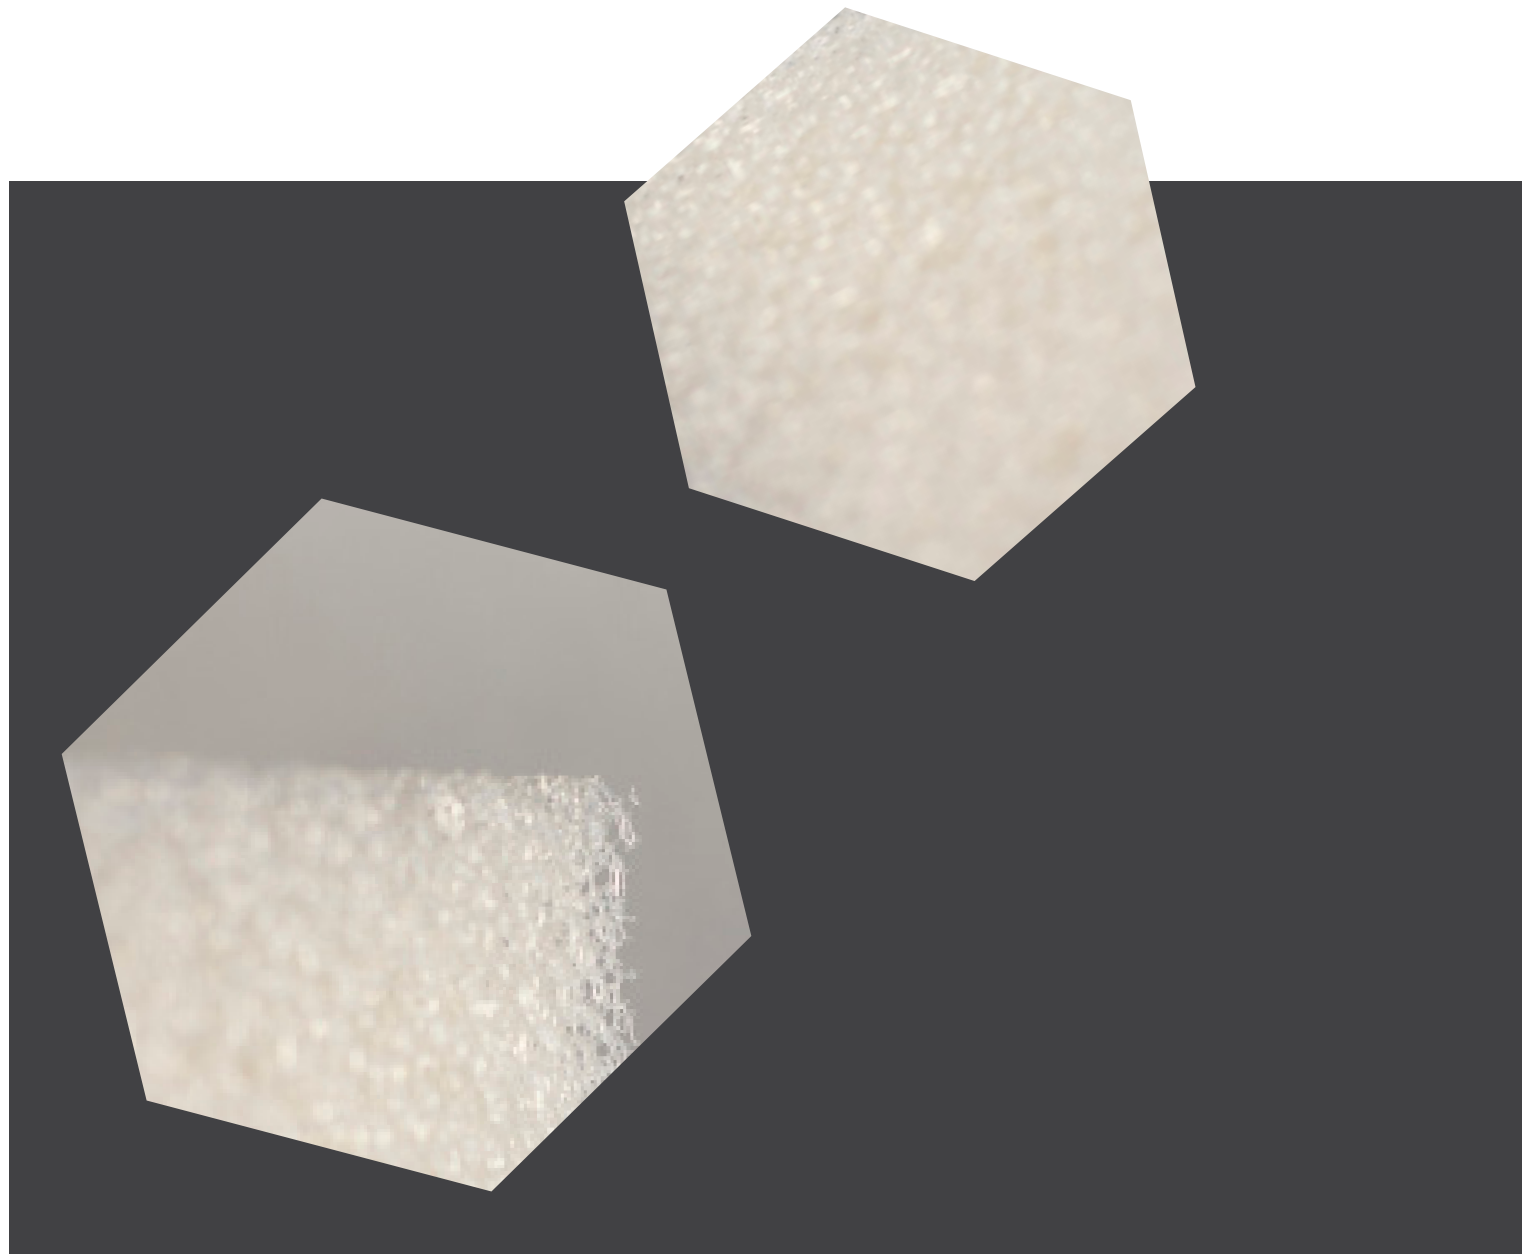

To stay in good shape you need to rest well.

Our foam is quick-recovery, which allows you to stay in good shape and offer, without variations in time or intensity of use, the same revolutionary performance in terms of rest and comfort.

The advantages of an outdoor foam with the comfort of an indoor foam.

Using Gravidry 100% open reticulated foam has all these advantages:

Premium foam

Gravidry reticulated foam was created in response to a market that demands a product with high technology and performance.

Dry fast

Gravidry foam has a drying capacity five times faster than normal foam.

Breathable

Thanks to its completely open structure, it facilitates air circulation and prevents the development of bacteria.

Draining

Our foam allows water or water vapour to pass through its structure and evaporate quickly and efficiently.

High comfort

We guarantee maximum comfort. To do this, we produce each one of them taking into account the necessary characteristics for the final application.

**We have a large
production capacity.**

At Gravidry we are prepared to meet orders to scale. Our production infrastructure and process optimisation allow us to meet a high volume of demand.

Products

GRAVIDRY 25 HD

Density: 25 kg/m³
Hardness: 4,70 kPa

GRAVIDRY 30 HD

Density: 30 kg/m³
Hardness: 5,90 kPa

GRAVIDRY 25 HS

Density: 25 kg/m³
Hardness: 2,50 kPa

GRAVIDRY 30 HM

Density: 30 kg/m³
Hardness: 4,40 kPa

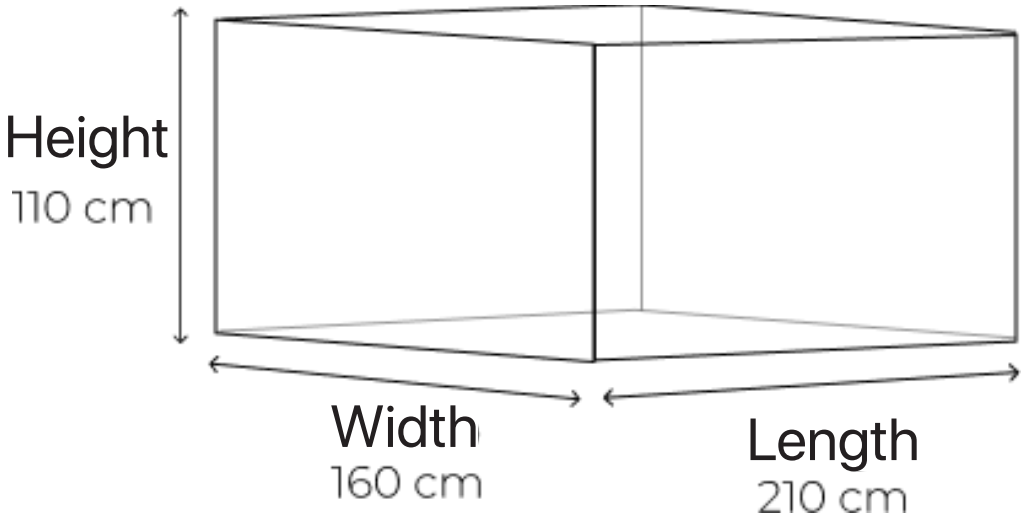

GRAVIDRY 30 FR

Density: 30 kg/m³
Hardness: 3,60 kPa

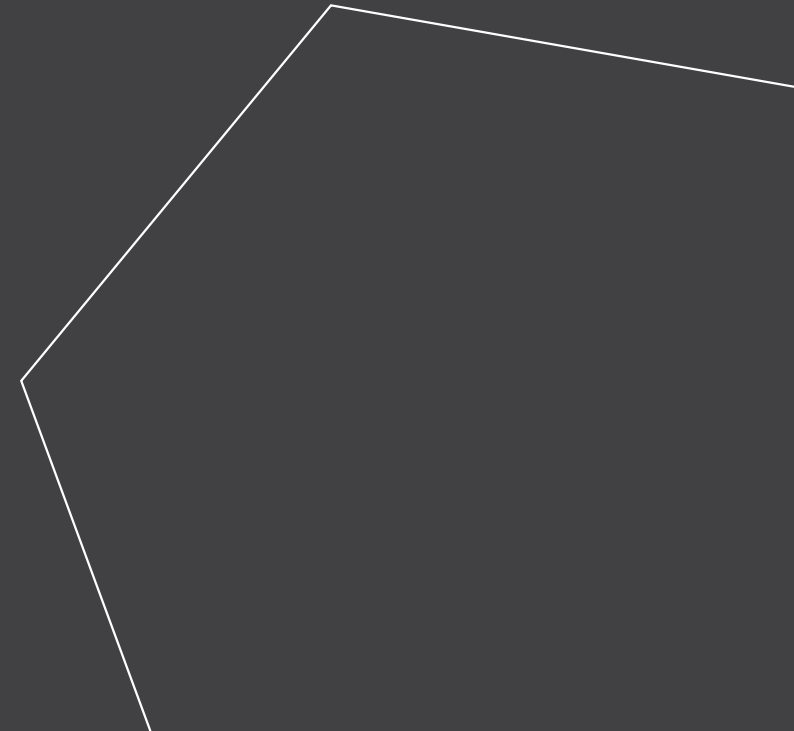

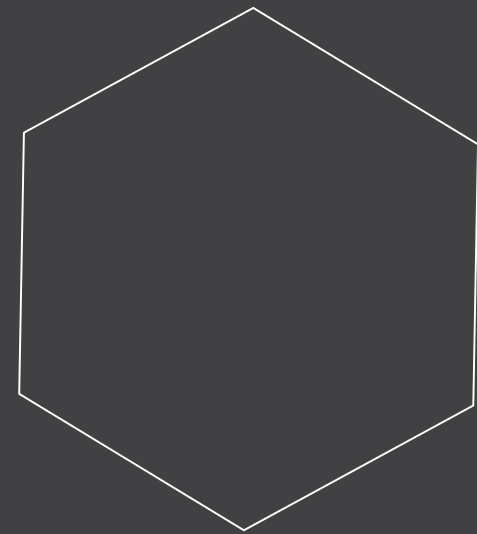

GRAVIDRY 30 HS

Density: 30 kg/m³
Hardness: 2,50 kPa

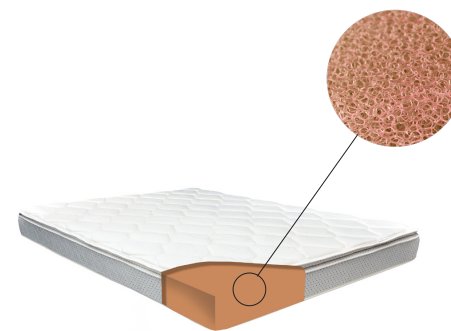

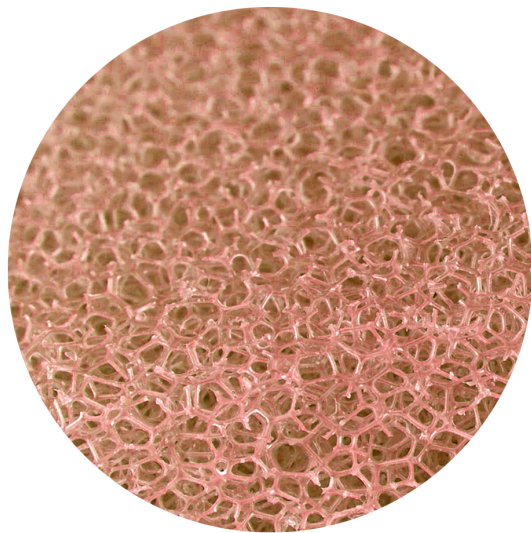

**There is a Gravidry
foam for your product.**

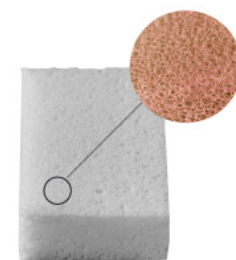

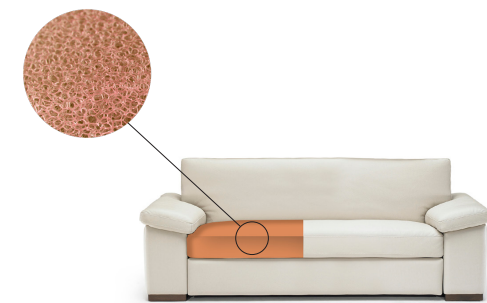

We have the foam you need whatever your project.

The versatility of our foams gives them multiple applications in various sectors: furniture, nautical or mattresses among others, thus offering a high quality product and performance for various applications.

Big blocks, occupying a small space.

We press our blocks to optimise their transport and storage.
The product returns to its original state without losing its properties.

Transport from the factory to your location.

GRAVIDRY foams stand out for their exceptional resilience, one of their most outstanding qualities. In just 24 hours after removing them from their plastic packaging, they are ready to be cut and handled. This feature allows us to efficiently compress the foams for transport, generating significant savings in transport costs and improving your logistical efficiency.

13,7 m

Gravidry is comfort.

We have a very wide range of foams in different densities, hardnesses and cell sizes. This allows us to work with customers and suggest the best foam, or combination of foams, for the model of seat, backrest or outdoor product you want to manufacture.

Gravidry is breathability.

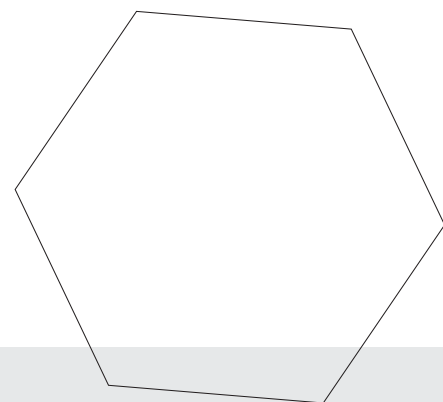

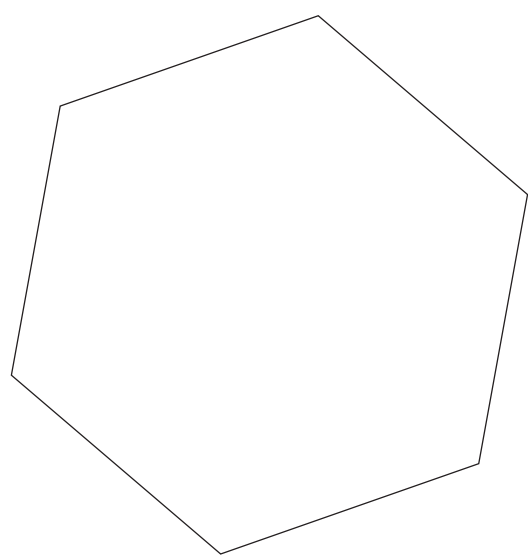

Moisture problems such as fungus, black spots, odours, etc. are solved with our open cell foams. Air is the natural enemy of moisture. Our philosophy is to work with breathable materials to create an open circuit within the product that prevents moisture from being trapped inside. All materials, such as fabrics, must be breathable to accelerate this quick drying and create the perfect synergy with our open cell foams.

Outdoor furniture with indoor comfort.

Making outdoor products using indoor materials has until now been a limitation because of the usual materials.

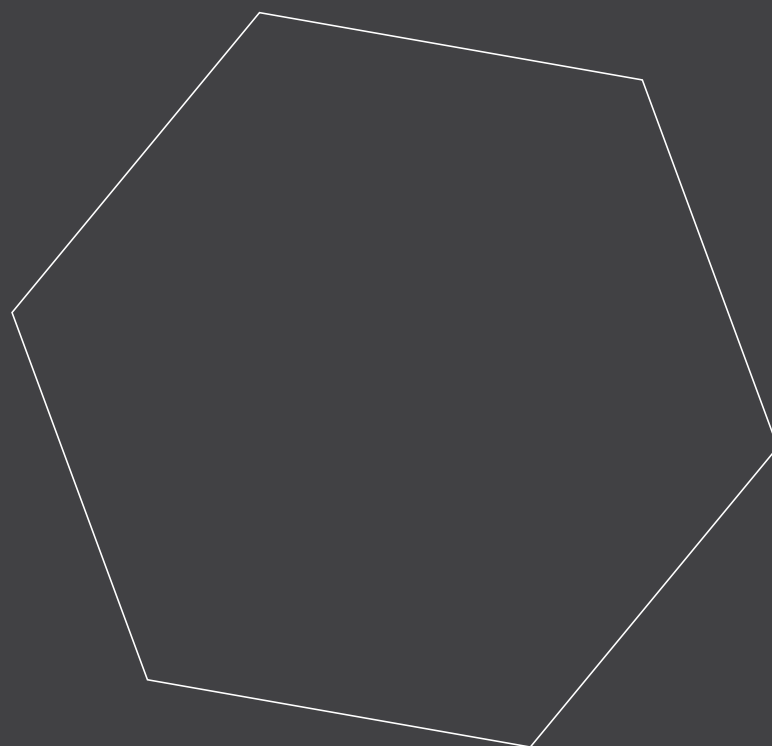

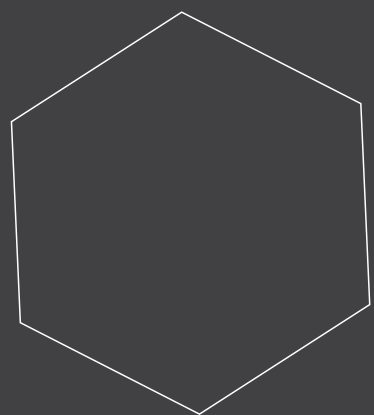

GRAVIDRY offers a wide range of outdoor foams to bring the comfort of the indoors outside.

Join the IN/OUT revolution.
